five(9)s EMPA Cleanup Services

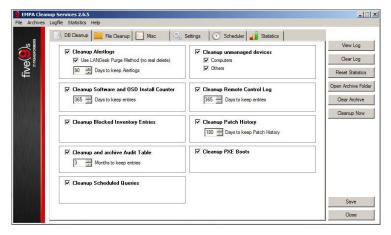

About five(9)s

five(9)s is a highly qualified technology provider specializing in client management and process design using LANDESK technology. We are one of the largest LANDesk partners in Europe and hold platinum status. Based on our longstanding, in-depth LANDESK knowledge, five(9)s develops unique add-on software for making LANDESK solutions and infrastructures even more efficient for users from all over the world. We run a large team of excellent consultants boasting more than ten years of LANDESK expertise at the highest level.

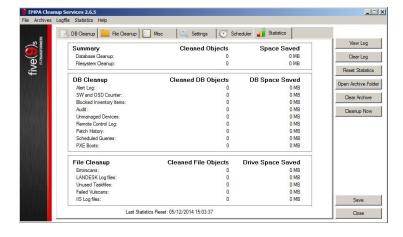

Clearing out your backyard - five(9)s EMPA Cleanup Services

You're probably familiar with the following scenario: You set up your client systems properly, your "golden image" is perfectly deployed to a huge number of new end-user systems and everybody is happy. But the longer the systems are in use, the slower they get. This also applies to your server systems. Your end users and administrators will be complaining.

This is why five(9)s developed its Cleanup Services for LANDESK, since a core server working at a sluggish pace is in no

one's interest. Cleanup Services perform different tasks. They ensure that your core server runs at peak performance by keeping the core server's file system and database tables clean, simultaneously deleting entries that are no longer needed after a configurable number of days. The built-in, configurable scheduler is responsible for starting the cleaning jobs as required. However, you decide whether to keep the data in archives for later retrieval, or to delete them permanently.

Further valuable features: Restart the LANDESK inventory and scheduler service and the IIS at scheduled intervals and set the IP address of clients that haven't delivered a valid inventory for a configurable amount of time to 0.0.0.0, in order to make life easier for those who do the remote control session.

Cleanup performs tasks as:

- Alert log Cleanup
- · Patch history Cleanup
- Error scan Cleanup
- Cleanup of blocked inventory objects
- Cleanup audit table
- Cleanup obsolete scheduled queries
- · Cleanup unused task files
- Remote control log Cleanup
- Move "Manual Vulnerabilities" to the "Do not scan" group
- Cleanup report via configurable HTML-based email
- Enable/Disable Cleanup Scheduler from UI
- Cleanup-Now Button

five(9)s EMPA Cleanup Services

Cleanup Alertlogs As long as apents are using alerts, the alert log table size will increase. Using LANDESK default settings, clients can produce a large amount of log entries every day, which will cause the database table to grow very fast evolup performance issues. Ummanaged Devices Discovery is a valuable tool to scan your subnets for devices that are not managed by LANDESK Monagement Stute. Scan results will be sorted by device types (clients, printers, infrastructure, etc.) and archived in the database as long as you do not use these entries developing agent of the related devices. Cleanup umanaged devices will delete these database entries so you are able to examine the actual results from your last scans. Outside difformation will not distancy our amyone. Cleanup Remote Control Log Cleanup Blocked Inventory. Entries Cleanup Blocked Inventory. Entries Cleanup Blocked Inventory inventory search as a LANDESK function that avoids the saving of unknown inventory objects, collected by the inventory scanner on your client machines, to the database. Use Cleanup Blocked Inventory Scanner on your clean machines, to the database use and the search and the saving of unknown inventory before the previous scanner on your client machines, to the database. Use Cleanup Blocked Inventory Scanner on your clean machines, to the database use of the properties of		
As long as agents are using alerts, the alert log table size will increase.
